

Progress in Two-Nucleon Spectroscopy

Monday, July 23, 2018 11:00 AM (30 minutes)

Anchoring the nuclear interaction in QCD is a long-outstanding problem in nuclear physics. While the lattice community has made enormous progress in mesonic physics and single nucleon physics, continuum-limit physical-point multi-nucleon physics has remained out of reach. I will review CalLat's strategy for multi-nucleon spectroscopy and our latest results.

Primary author: Dr BERKOWITZ, Evan (Forschungszentrum Jülich)

Co-authors: Prof. NICHOLSON, Amy (UNC); WALKER-LOUD, Andre (LBNL); Dr GAMBHIR, Arjun (Lawrence Livermore National Laboratory); CHANG, Chia Cheng (iTHEMS RIKEN); BRANTLEY, David (LBNL); Dr RINALDI, Enrico (RIKEN BNL Research Center); MONGE-CAMACHO, Henry (College of William and Mary, LBNL); BALINT, Joo (Jefferson Lab); Dr CLARK, Kate (NVIDIA); Dr MCELVAIN, Kenneth (LBNL); Dr VRANAS, Pavlos (LLNL); Dr KURTH, Thorsten (NERSC)

Presenter: Dr BERKOWITZ, Evan (Forschungszentrum Jülich)

Session Classification: Plenary
